## Barrington Rose Arch

PLEASE NOTE: THIS COMES WITH 3 BOLTS - THESE ARE ATTACHED THROUGH ONE SIDE OF THE TOP FRAME

1. This arch arrives in four sections – two for each side of the arch
2. Please lay out the arch on the ground and fix the top edge of the two arched pieces together using the three bolts already attached through one side
3. These will need to be tightened with a spanner
4. Once this is done slide the lower section of the arch into the wider rods of the upper section on each side
5. These rods need to be aligned correctly before fully sliding in
6. With two people you can now lift the rose arch upright and move it into position
7. The rods on the lower section can be pushed into the soil as far as possible to keep the arch upright and stable

This Barrington Rose Arch is made from solid uncoated steel rods, designed to weather to a rusted finish over time and exposure outdoors.
