

## Care Instructions

---

Our planters are designed to work both in and outdoors and for that reason do not have drainage holes.

Should you wish to add your own holes to aid drainage for plants left outdoors, the metal base of these products is easy enough to drill through.

Our planters are made using a zinc coated sheet metal with a matt painted finish.

To prolong the life of this product we recommend using a plastic inner plant pot rather than filling directly with damp earth which, if waterlogged, will erode and rust the walls of the planter over time.
